# Meet UniFit™:

## Your Unified Connection

Introducing UniFit™, your Unified Connection to hassle-free implants.

With 30 years of implantology knowledge and experience, we have taken the best of our platforms and combined them into our new UniFit™ implant.

Surgical and restoration procedures can be complicated, which is why we are focused on making them simple. With UniFit, one prosthetic connection fits all.

**This means that ALL prosthetics and attachments fit ALL size and diameter UniFit implants**

This means:

- No need for spares
- No multiple sizes for handpieces
- No extra storage for all the extra prosthetics!

Our innovative implant design features a friction 7° conical connection with a six-position star shape index that allows for one unified prosthetic connection to fit all implant diameters. This simplifies surgical and restoration procedures, making the process faster and more efficient.

UniFit™ ensures a solid fixture of the abutment, enhancing the implant-abutment seal and minimizing micromovements. Our unique design also enables simple yet flexible implant and abutment alignment, allowing for self-guiding insertion and clear-cut tactile feedback.

The external geometry and surface of UniFit™ are designed for immediate function and loading, providing optimal stability in all bone types. Every feature of UniFit™ is designed to enhance the success of the procedure and deliver better results, ensuring a better experience for both doctors and patients.

In short, the concept behind UniFit™ is simple, but the results are immediate. Say goodbye to complicated dental implant procedures and hello to a hassle-free experience with UniFit™.

NOTE:

- All measurements are in mm.

UniFit is a variable-thread tapered implant with a spiral tap that ensures immediate stability through bone condensation during implant placement.

- Variable threads and a tapered design allows for accurate implant placement, for self-tapping, and for improved aesthetics.
- Unique design also ensures better load distribution, allowing for immediate function on all bone types.

UniFit features Adin's OsseoFix™, a unique Calcium Phosphate blast surface treatment that enhances the implant's integration with the bone.

Experience immediate stability, improved accuracy, and better load distribution with UniFit Spiral Implant featuring Adin's OsseoFix™.

⚠ Implant - Abutment index alignment is indicated by implant driver grooves.

# Drilling Sequence

Drilling speed** (rpm)	800-1200		800-1200		800-1200			800-1200		
Implant Diameter	ø3.5/3.75		ø4.3		ø5.0			ø6.0		
 <p>Hard Bone</p> <p>D1, D2</p>	 *Tri-step	 ø3.5/3.75	 ø3.6	 ø4.3	 ø4.2	 ø4.6	 ø5.0	 ø5.2	 ø5.6	 ø6.0
 <p>Soft Bone</p> <p>D3, D4</p>	 *Tri-step	 ø3.5/3.75	 ø3.6	 ø4.3	 ø4.2	 ø4.6	 ø5.0	 ø5.2	 ø5.6	 ø6.0

\* For initial drilling, you may use ø2, ø2.8 and ø3.2 drills in sequence instead of the Tri-step drill.

\*\* Drilling should be performed at low speeds (800rpm-1200rpm) in accordance with bone quality at the specific site.

\*For initial drilling, you may use a Tri-step drill instead of ø2, ø2.8 and ø3.2 drills in sequence.

Note: (x.xx) Drill to the depth of the cortex only.

⚠ CAUTION: The drill preparation is up to 1mm longer than the implant. \* The drill apical step = 1.8mmD.

## Impression

Our components for taking impressions for all restoration types can be utilized for digital or conventional protocols, either implant-level, or abutment-level procedures.

Our broad range of solutions and flexible designs enable easy and accurate restorative planning, whether you're dealing with a single tooth, multiple teeth, bridge, or full mouth rehabilitation.

## Single TMA™ Recommended Torque 35(Ncm)

Adin's range of screw-retained restorations has expanded to include the single TMA. This option offers the benefits of TMA abutments while still allowing for accurate and flexible restoration of a single tooth.

With Adin's STMA, you can combine the advantages of a trans-gingival approach and a screw-retained single tooth restoration, resulting in increased flexibility in terms of aesthetics, safety, and maintenance.

The Single TMA also includes a hex index that provides the necessary accuracy for positioning and retention to support a single tooth crown. You can choose from open and closed tray transfers, and scan bodies for digital impressions, and replicas are available to streamline the work process.

## TMA™ - Multi Unit

Recommended Torque 35(Ncm)

Our TMA™ (Trans Mucosal Abutment) system is indicated for multiple-unit, screw-retained restorations, and may be used in combination with an implant-level framework design.

- Elevates restorative seating platform when implant-level restoration is not practical
- Provides better access when using implants with divergent angles
- Accommodates full and partial edentulous arches
- Available in straight or angled (17°, 30°, 45°) with different gingival heights
- Abutments are delivered with handles for easy insertion and seating

# Surgical Kits

Successful surgical procedures start with having the right instruments and tools to ensure your desired treatment outcomes are met.

That's why our range has everything you need, including drills, keys, ratchets, and insertion tools.

Not only do they make procedures safer and easier, they result in an enhanced patient experience.

Our surgical kits streamline and simplify your implant procedures.

# Drills & Tools

Our DLC (Diamond-like Carbon) Tri-Step/Twist Step Surgical Drills are designed for a simpler, faster, and safer surgical drilling experience.

Here are the benefits:

- Simplify the cutting process, save time, and minimize risks with our Tri-Step & Twist-Step DLC drills.
- Improved DLC drill coating provides state-of-the-art hardness and slickness, increasing the lifespan of the drill, maintaining sharpness for extended drilling, and generating less heat. This reduces the chances of heating the bone or complications arising from conventional drilling protocols.
- Available in diameters ranging from 2.0 mm to 5.6 mm.
- Specially designed for Adin's implants and suitable for Adin's simple and convenient drilling protocol.
- Clearly and conveniently marked and can be used with or without drill stops.

## Tri-Step Drills

Adin's Tri-Step Drills condense drilling protocols and avoid the need for multiple drills throughout complex procedures.

Since friction at the cutting site is reduced, complications common with high-speed drilling are decreased and faster & better recovery can occur.

The drills are designed to reduce friction at the cutting site, therefore leading to a decrease in complications that are often associated with high-speed drilling. This can result in a faster and more efficient recovery for patients.

# Guided Surgery

Introducing the adinguide™: a guided surgery tool designed to enhance your clinic.

Our kits are tailored to support effortless and precise implant placement. With our proprietary ActiveFlow™ Irrigation technology, where coolant is efficiently delivered to the bone, preventing overheating.

The adinguide™ drills feature carved channels for direct coolant flow from your hand-piece to the osteotomy site. Our intuitive drill kit accommodates different implant sizes and lengths, while the tissue punch and pilot drill allow flapless access.

The keyless procedure offers easy handling and clear visibility of the surgical site.

Our self-centering drills utilize a diameter cylinder at the top to ensure accurate positioning within the guide's sleeve. Additionally, built-in stoppers guarantee precise and consistent drilling depths.

# Kerator Overdenture Attachment System

Attachments are available for all major implant systems

Implant systems including Adin Implants, Nobel Biocare (Brånemark, Sterioss, Replace, Replace Select), 3i, Astra, ITI, Ankylos, BioHorizon, Biolok, Bicon, Camlog, Endopore, Frialit-2 & Xive, Lifecore, Zimmer (Calcitek, Paragon, Swissplus), Uniti, Pitt-Easy, Osstem, Dentium, Dio, Dentis, Megagen, Cowell Medi, Warantec and many others!

1

Included plastic carrier provides safer handling of the abutment. The carrier is also useful for checking the alignment angles of the implant fixtures.

6

The DUAL UNDERCUT DESIGN of the Kerator metal housing attachment provides a sturdier retention within the denture acrylic.

2

Kerator has the LOWEST VERTICAL HEIGHT of all overdenture attachment system available today.

3

DUAL RETENTION MALE allows the denture cap to gently pivot in any natural direction during occlusal while providing greater resiliency and preventing it from dislodging.

4

SELF-ALIGNING DESIGN automatically centres the male on the housing attachment prior to engagement, allowing patients to easily seat their overdenture.

5

EXTENDED RANGE MALE allows for the insertion of the overdenture with up to 40 degree of divergence between implants. 15 degree angled abutments can be used in combination to further extend the allowable divergence.

The titanium self-aligning housing that corrects divergency up to 40°
