

Lake Como Institute Full Immersion Training

Module 1: Anatomical And Surgical Training With Workshop On Human Cadaver

With: Tiziano Testori, Gabriele Rosano and Lake Como Institute Faculty

Working on human cadavers is equivalent to performing surgery on a live patient, but surgical skills can be practiced and improved without taking risks.

Lake Como Institute presents a unique and very practical two-day hands-on dissection course for clinicians who place implants. Working on human cadavers is the most helpful training modality, it is just like performing surgery on a live patient and the surgical skills can be practiced and improved without taking risks.

After a concise theory part, the faculty will show the dissection techniques that will be performed by each participant. One head will be assigned to every two participants. 90% of the course is hands-on anatomical training and only 10% is theory.

Module 2: Perio-Implantology For The General Practitioner (Gp): Surgical And Prosthetic Phase

With: Tiziano Testori, Matteo Invernizzi and Lake Como Institute Faculty

In recent years, treatment protocols and guidelines have changed and less invasive procedures are used, furthermore surgical and prosthetic protocol have dramatically evolved in terms of efficiency and predictability.

This course will give practical guidelines that can be easily used in day-to-day clinical practice to learn basic bone regeneration techniques and soft tissue management around implants in order to help maximize peri-implant esthetics as well as long-term predictability and up to date prosthetic protocols. Treatment algorithms will be outlined to help guide the clinician to choose the various procedures and techniques to predictably meet patient expectations. Hands-on on pig jaws for bone regeneration techniques and soft tissue management will be provided.

Why is a human cadaver course complementary to traditional training?

Working on human cadavers is equivalent to performing surgery on a live patient, but surgical skills can be practiced and improved without taking risks.

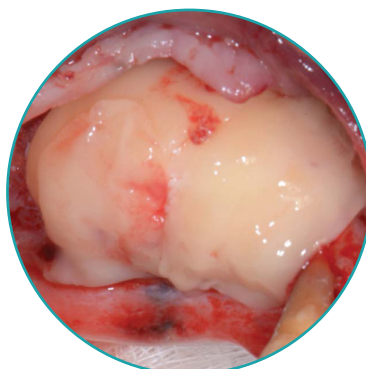

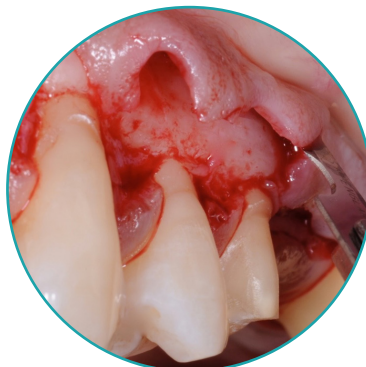

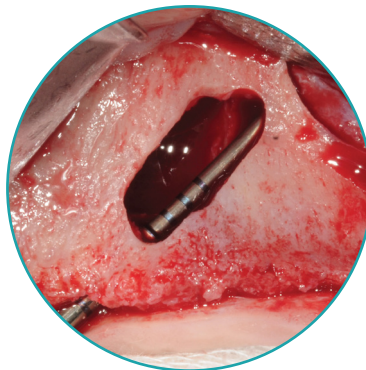

90% of the course is hands-on.

In this course you will:

1. Build confidence and develop skills with the most utilized bone reconstruction techniques and soft tissue grafting procedures.
2. Increase predictability and long-term stability of your bone graft cases
3. Improve proficiency in implant dentistry through standardized surgical and prosthetic protocols

Lake Como Institute

Lake Como Institute combines evidence-based approach with 30 years of clinical experience in the field of perio-implantology and cutting-edge diagnostic and surgical equipment. Courses will allow you to offer professional, comprehensive dental care for your patients. Clinical excellence is based on protocols and attention to details, fundamental factors to achieve long-lasting outcomes.

Module 1:

Location:

Multimedica: Milan, Italy

Dates:

July 1st and 2nd 2019

Directed by:

Tiziano Testori MD, DDS, FICD

Cost:

€3500 ^{+VAT}

Includes €1000 of Osteobiol products FREE!

Module 2:

Location:

Lake Como Institute: Como, Italy

Dates:

July 3rd, 4th & 5th 2019

Directed by:

Tiziano Testori MD, DDS, FICD

Cost:

€4000 ^{+VAT}

Includes €1000 of Osteobiol products FREE!

Special Offers:

Book both modules for:

€7000 ^{+VAT}

Includes €2000 of Osteobiol products FREE!

Early Bird Offer:

10% off if booked before
30th March 2019
