

FibreKor[®] Post System

Important tips

In order to assist you when using the FibreKor Post System, we have included the following helpful hints:

1. Cement may be carried to the canal via a Lentulo Spiral instrument to ensure good coverage of cement in canal.
2. To enhance retention of the core and restoration, 2 mm of tooth structure, not on core build-up.
3. Finish line or margin of preparation should remain on solid tooth structure, not on core build-up.
4. Resin cements and core materials provide the best result when used with the FibreKor Post System.
