“ Comments by Participants ”

The best organized and most thorough that I have ever taken. Everything is directly applicable. The value of this course is immeasurable.

The Stuart Orton-Jones Anatomy course is the most practical, useful and appropriate course for all dentists practising or embarking on the field of surgical dentistry. Working on fresh cadavers is really just like performing surgery on a live patient – it's that realistic.

This is a unique course where surgical skills can be practiced and enhanced without risk and is of great benefit to novices and experts alike. It has given me the confidence to exceed and succeed in my professional career.

The Venue

University of Bristol

A newly built anatomy dissection facility at: University of Bristol, Department of Anatomy, School of Veterinary Science, Southwell St. Bristol, BS2 8EJ, UK
