Irradiated Allogenic Cortical/Cancellous Bone Blocks

The Rocky Mountain Tissue Bank, a Colorado Nonprofit Corporation, was organized to develop and produce Irradiated Allogenic Cancellous Bone & Marrow graft material for human transplantation. This product stimulates bone regeneration in patients with bone loss from trauma, or periodontal disease and provides a foundation for dental implants.

It is reported to Rocky Mountain Tissue Bank by clinicians – “Irradiated Allogenic Cancellous Bone & Marrow graft material gives results closest to those obtained by autogenous bone. This relates to the predictability, speed, and quality of new bone formation.”

**Available in:**

Irradiated Allogenic Cancellous Bone and Marrow Particulate.

**Cancellous Particulate Vials**

- 1/4 gram
- 1/2 gram
- 1 gram
- 2 gram
- 3 gram

**Cortical Particulate Vials**

- 1/2 gram
- 1 gram

**Cortical / Cancellous Bone Blocks**

D	W	L	D	W	L
5x10	10	10	10x10	10	10
5x10	20		10x10	20	
5x10	30		10x10	30	

D = Depth W = Width L = Length

- Indications:**
- Sinus Augmentation
  - Sinus Lift
  - On-lay Grafts
  - Periodontal Defects
  - Segmental Osteotomies

**Our processing provides you the greatest assurance of allograft quality and safety.**

Rocky Mountain Tissue Bank is accredited by the American Association of Tissue Banks and meets all current FDA regulations. We are ISO 9001:2000 and ISO 13485:2003 Certified – Certificate #ID – A0001985-2 and A00019840-01. Our Canadian Registration number is 100156.
