DOWN TECHNIQUE

COMMONLY APPROVED
APICAL FINISHING DIAMETERS

the next generation of the **endo gold standard**

PROTAPER NEXT™ is the successor to the PROTAPER® UNIVERSAL system, which has been the gold standard in endodontics for many years. It is an efficient solution for endo practitioners seeking a versatile, flexible system that will handle the vast majority of root canal treatments.

2001 **PROTAPER®**

THE NEXT GENERATION...

...covers more difficult clinical cases*

The unique swaggering movement and the greater flexibility of the PROTAPER NEXT™ files make it possible to shape more severely curved narrow canals than what was possible before with most NiTi systems on the market.

...brings improved safety*

The risk of file breakage is significantly decreased, at the same time; respect of the original root canal anatomy is greatly improved. Instrument and patient safety is essential to good endodontics.

...shortens the shaping time*

A shorter clinical sequence means that less time is spent changing instruments. The high cutting efficiency also reduces the shaping time. For the dentist, this is valuable time that can be used for other procedures, such as irrigation.

* Compared to leading brands

NEXT GENERATION TECHNOLOGY

Swaggering Effect

PROTAPER NEXT™'s innovative off-centred rectangular cross section gives the file a snake-like "swaggering" movement as it moves through the root canal. The rotation of the off-centred cross section generates enlarged space for debris hauling. Optimisation of canal tracking is also achieved due to the "swaggering effect".

M-WIRE®

The M-WIRE® NiTi material improves file flexibility, while still retaining cutting efficiency. This is achieved through an advanced Dentsply proprietary thermal treatment process. M-WIRE® NiTi also provides greater resistance to cyclic fatigue, the leading cause of file separation.

the next **clinical outcome**

PRE-OP

Image of maxillary left first premolar. Nonvital pulp had resulted in radiographic lesion of endodontic origin.

POST-OP

Obturation downpack image demonstrating two canals and five visible portals of exit sealed. PROTAPER NEXT™ provides predictable deep shaping preparations for confident and consistent 3D obturation regardless of obturation technique.

Courtesy of Dr. John West

entering the world of increasing medical standards

DENTSPLY MAILLEFER advocates medical standard care by packaging PROTAPER NEXT™ files in pre-sterilised blister packs for single patient use. Using two to three PROTAPER NEXT™ shaping files for each clinical procedure, instead of four to five previously, makes it affordable for the practitioner to implement a single use policy for endodontic instruments with numerous advantages, namely:

Ergonomics

There is no need for reprocessing and re-organising PROTAPER NEXT™ NiTi files.

Reduced risk of file breakage

Endodontic files exhibit signs of wear during normal use. They are also subject to cyclic fatigue, which is the main cause of file breakage during patient treatment. This increases dramatically with multiple use. Single use therefore reduces the risk of file breakage and thus increases patient safety.

Optimal cutting efficiency

Further research has shown that using endodontic files for multiple cases actually reduces their cutting efficiency, affecting the performance and satisfaction for both dentist and patient. With PROTAPER NEXT™, there is no reduction in cutting efficiency, as a new instrument is used for each patient.

No risk for cross contamination

No matter how well an instrument is sterilised, research shows that certain bacteria and tissue remnants may remain on the instrument. Additional uses of instruments therefore increase the potential of cross-infection to every subsequent patient.

PROTAPER • NEXT™

ready to go with **a complete solution**

PROTAPER NEXT™ is a complete solution, covering all the steps in the endodontic procedure:

TREATMENT

Shaping files

The PROTAPER NEXT™ shaping files make it possible to treat the vast majority of endodontic cases.

Glide path files

The recommended rotary glide path files for PROTAPER NEXT™ are the DENTSPLY MAILLEFER PATHFILE® P1/O13 and P2/O16.

Endo motor

The X-SMART™ PLUS motor is everything you liked about the X-SMART™ with a plus! The plus benefits include no foot pedal, an on/off button on the motor hand piece as well as a miniature contra-angle head to provide excellent visibility and access. Moreover, file selection can be made at a single glance with the ISO colour-coded file library. The motor operates in continuous or reciprocating motion with pre-programmed settings to save time in your daily practice.

OBTURATION

PROTAPER NEXT™ paper points match the size of the canals prepared with a PROTAPER NEXT™ file and are developed for a safe, rapid drying process of the canals. The paper points are provided sterile for patient protection.

PROTAPER NEXT™ gutta percha points match the size of the canals prepared with PROTAPER NEXT™ files allowing you to achieve rapid, precise master-cone obturation.

GUTTACORE® for PROTAPER NEXT™ is the first obturator technology that uses a cross-linked gutta percha core. Crosslinking is a well-established scientific process that connects the polymer chains and transforms the gutta percha to make it stronger, while keeping its best features.

THERMAPREP® 2 oven is for use with the new GUTTACORE™ obturators. In addition to the GUTTACORE® obturators, the THERMAPREP® 2 oven works with THERMAFIL®, PROTAPER® UNIVERSAL and WAVEONE® obturators.

RETREATMENT

In the event of retreatment, PROTAPER® UNIVERSAL retreatment files are the recommended instruments for the obturation unfilling procedure.
