

## Convenience and Versatility

### CoForm Pre-Formed Matrices from Directa

Directa's CoForm™ system is a set of pre-formed, transparent matrices that are specifically designed for composite restorations around incisal edges and fractures. The matrices easily conform to patient's dentition to form a more natural restoration.

CoForm's ready-cut mesial and distal corners do not adhere to composite material, making them easy to remove without drag. CoForm comes in four sizes and provides for canines, anteriors and first molars. The matrices are adaptable to almost any clinical application.

A primary benefit of using CoForm is that it aids pressure to push material into cavities and etched tubes more easily. Using these pre-formed, transparent matrices also reduces wastage.

CoForm is packaged in a handy clinical dispenser with a simple coded selection system, providing ease of use for the clinician.

Directa AB is a privately owned Swedish dental manufacturer and is one of the fastest growing producers in the Nordic region. Other well-reputed Directa products include FenderWedge®, FenderMate®, Luxator® Extraction Instruments, PractiPal® Tray System and ProphylPaste CCS.
