A unique heterologous bone gel

CLINICAL INDICATIONS SUMMARY
Maxillary sinus lift with crestal access; treatment of 3-wall periodontal defects and gingival recessions; it can also be used mixed with OsteoBiol® Gen-Os as graft stabilizer.

CLINICAL INDICATIONS OVERVIEW
The exclusive Tecnoss® manufacturing process guarantees an exceptional malleability and plasticity\(^1\); furthermore the syringe packaging gives Gel 40 extraordinary handling properties making this product the ideal choice for crestal access sinus lift\(^2\), deep and narrow peri-implant defects, three-wall intrabony defects and, in combination with Evolution membranes, for gingival recessions\(^3\). Thanks to the collagen component, Gel 40 facilitates blood clotting and the subsequent invasion of repairing and regenerative cells.

Furthermore, the Tecnoss® manufacturing process avoids granules ceramization, allowing a progressive resorption of the biomaterial and, at the same time, a significant new-bone formation rate\(^4\). Gel 40 “soft” consistency also guarantees an easy and healthy soft-tissues healing.
